PROFESSIONAL SUMMARY

GenAI Developer with hands-on experience in LLMs, Retrieval-Augmented Generation (RAG), and agentic AI systems. Specialized in LangChain, LangGraph, FastAPI, and prompt optimization — reduced LLM token costs by 60–70% in production.

TECHNICAL SKILLS

Languages & Tools: Python, SQL, Docker, Git, GitHub Actions, REST APIs

AI/GenAI: LLMs, GenAI, RAG, Prompt Engineering, Token Optimization, NLP, Machine Learning, Deep Learning, Embeddings, Vector Search, Agentic AI, LLM Fine-Tuning.

Frameworks & Libraries: LangChain, LangGraph, AutoGen, CrewAI, FastAPI, Flask, Streamlit, Hugging Face, PyTorch, TensorFlow.

Databases: PostgreSQL, Vector DB, FAISS, Pinecone, ChromaDB.

Soft Skills: Problem Solving, Collaboration, Adaptability, Continuous Learning, Good Communication.

WORK EXPERIENCE & INTERSHIPS

AI Developer Intern | SMARTnCODE Pvt. Ltd, Hyderabad

Nov 2025 - Present

- Built FastAPI-based GenAI microservices supporting multiple LLM workflows, improving response automation and cutting manual processing by ~40%.
- Implemented prompt compression and context-window optimization strategies, reducing LLM token consumption by 60–70% while maintaining output quality and accuracy.
- Developed NLP modules for automated text extraction, summarization, and document generation; integrated speech-to-text pipelines with LLM backends for voice-driven automation.

PROJECTS

ReadFusion – Multimodal RAG System | [GitHub Link](#)

- Architected an end-to-end multimodal RAG system using LangChain and FAISS supporting PDF, text, and structured data ingestion with high contextual retrieval accuracy.
- Applied chunking strategies, embedding tuning, and prompt optimization to minimize irrelevant context passed to the LLM, improving answer quality.
- Built a real-time Streamlit interface with async FastAPI backend for concurrent document querying and multi-user scalability.

Tech Stack: Python, FastAPI, LangChain, FAISS, Streamlit, Vector Embeddings, Prompt Engineering, GitHub.

AI Data-Analyst Agent – Autonomous Agentic System | [GitHub Link](#)

- Built an autonomous LLM agent using LangChain and LangGraph with multi-step reasoning, dynamic tool selection, and workflow orchestration across SQL databases and REST APIs.
- Implemented persistent agent memory and stateful context management for long-horizon analytical tasks with PostgreSQL-backed state and audit logging.
- Integrated real-time Slack API alerting via FastAPI to deliver automated insights to stakeholders without human intervention.

Tech Stack: LangChain, LangGraph, Python, PostgreSQL, FastAPI, Slack API, SQL, Agentic AI, GitHub.

EDUCATION

Vaagdevi Engineering College (JNTUH)

Warangal, Telangana

B. Tech – Computer Science Engineering (AI & ML) CGPA: 6.6

Nov 2022 – Jul 2025

Sai Spurthi Institute of Technology

Khammam, Telangana

Diploma – Electronics Communication and Engineering CGPA: 6.75

Jun 2019 – Aug 2022

HOBBIES & INTERESTS

- Building intelligent systems and exploring emerging AI research.
- Personal investing and financial data analysis.
- Continuous learning through technical reading and experimentation.
